eVod

USER MANUAL

E-CIGARETTE

MADE IN CHINA

INSTRUCTION MANUAL

For safe and effective use of e cigarette, please read through the following information carefully before using and follow the standard operating procedures strictly.

Storage: eVod and its supporting parts should be kept away from children's reach and stored safely in a dry environment.
Maintenance: eVod should be maintained regularly. Clean the screw thread of the different parts such as clearomizer, chargers and power supply with a tissue dipped in purified un-perfumed alcohol (please refer to your local drugstore). Clean screw thread will provide better electronic conduction. Blow into the clearomizer once and a while to evacuate left over liquid. When the vapor diminishes significantly the power supply needs to be charged.
eVod power supply: The eVod is powered by a 3.7V power supply battery.
eVod charge: The eVod is specially adapted for eVodpower supply.
Input voltage of the USB home charger is AC 100V-240V 50/60HZ. The input voltage of USB car charger is DC12V-24V. The input voltage of the USB battery charger is 5V, 500mAh and the output voltage is 4.2V 420mAh.Pay attention to the value of local voltage to be in a accordance of that of eVod charger.

1.STRUCTURE

eVod consists of power supply, clearomizer and mouthpiece. After entirely assembled, when you press the manual switch, the eVod will be actived to vaporizing.

The Structure Of eVod

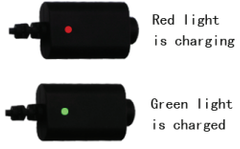
2.FEATURES

Unpack the box and take out of the kit of eVod, then twist the clearomizer onto eVod battery, press the switch on to enjoy vaporizing.
Do not use eVod in a vertical position, since liquid could leak out. Push the manual button for no longer than 5 seconds to avoid overheating of the clearomizer.
In case of eVod vaporizing continuously or shows signs of overheating, stop the usage, wait about 10 seconds to start use again.

3.NORMAL CHARGER

Screw the dedicated power supply in the charger, and connect the charger to the power outlet.
(1). The first charge should be kept for over 8 hours, even if the LED light turns green.

(2). Use for 20 minutes
(3). Charge the power supply for another 1 hours.
Your power supply is now ready for normal use. Normal charging time should be kept for 3 hours(even if the LED light turns green).



The Light Of Charger

Do not use the charger in humid areas.
Do not charge the power supply near a high-temp heat source.
Do not weld or pierce the power supply
If the power supply is found to be emitting any odor or heat or be discolored or deformed or have any abnormally during charging,

please cut off the power supply from eVod body or charger or suspend the use of it.
The eVod charger can only be used with eVod dedicated power supply. Do not try to use this charger other kinds of power supply.
Please keep the eVod's components from the reach of the children or animals.

4.HOW TO CHARGE

Chargering

Screw the dedicated power supply in the optional USB charger cable. Insert the USB charger cable into the USB port of your

computer, USB home charger and USB car charger.
Do not charge power supply outdoors or in a damp environment.
Keep all parts out of children's reach.

5.HOW TO FILL THE E-LIQUID

1). Screw off the clearomizer from the e-cigarette .
2). Turn the clearomizer upside-down.
3). Screw off the connector.
4). Fill e-Liquid 0.4ml-1.6ml into the plastic tube at the edge. DO NOT over fill it.
5). Screw on the connector to the clearomizer.
6). DO NOT screw off it directly to refill when it's upright.

Injecting E-liquid

6.WARNING

This product is intended for adults over the age of 19 or the legal smoking in your state. This product is not for use by children, pregnant women, women who may become pregnant, nor by non-smokers.
